Product Name:	Distinct Designs Rubber Stair Treads
Declared Unit:	1 m
Declaration Number:	SmartEPD-2025-085-0598-01
Date of Issue:	September 11, 2025
Expiration:	September 11, 2030
Last updated:	September 11, 2025
EPD Scope:	Cradle to gate with other options A1 - A3, A4, A5, C1 - C4
Market(s) of Applicability:	North America

General Organization Information

Flexco Corporation, the EPD Owner, is a family-owned business operating a manufacturing facility in Tuscumbia, Alabama, where the declared product is produced. Originally founded as a tire manufacturer during World War II, Flexco has since evolved into an industry-leading provider of high-performance commercial flooring. The company has a longstanding commitment to delivering high-quality flooring products to a diverse range of customers. The Tuscumbia facility is certified under ISO 14001 for its environmental management system, reflecting Flexco's dedication to minimizing environmental impacts and continually improving environmental performance. As a family-owned organization, Flexco emphasizes responsible manufacturing practices, efficient resource use, and environmentally conscious product design. The company actively works to reduce waste, optimize material use, and lower emissions across its operations in support of sustainable building practices.

Further information can be found at: <https://flexcofloors.com/>

Limitations, Liability and Ownership

Environmental Product Declarations from different programs (following ISO 14025) may not be comparable. Comparison of the environmental performance of products using EPD information shall be based on the product's use and impacts at the building level. EPDs that do not cover all life cycle stages (e.g., cradle-to-grave) shall not be used to make comparisons without additional context and assumptions. EPD comparability is only possible when all relevant life cycle stages are included and equivalent data quality, system boundaries, and assessment methods are used. Variations in results may occur due to differences in background LCI datasets, regional factors, and LCA modeling approaches or software tools. The EPD Owner has sole ownership, liability, and responsibility for the content of this EPD.

Reference Standards

Product Description

This Environmental Product Declaration (EPD) covers Flexco Distinct Designs Rubber Stair Treads, designed for commercial, educational, and institutional building applications. Manufactured in Fostoria, Ohio, Flexco Rubber Stair Treads are offered in a variety of styles, surface textures, and nosing configurations to meet functional and design requirements for interior stairs.

Surface options include smooth, hammered, and raised disc profiles, with no factory-applied finish. Treads are available in a wide range of lengths from 36 inches to 108 inches depending on style, and are produced with round, square, or square-adjustable nosings.

Flexco Distinct Designs Rubber Stair Treads are classified as ASTM F2169 Type TS, Class 1 or 2, Group 1 and/or 2, Grade 1. They meet or exceed Class I performance under ASTM E648 for critical radiant flux and demonstrate excellent resistance to smoke generation (ASTM E662), chemical exposure (ASTM F925), and color stability (ASTM F1514). They also meet slip resistance requirements per ASTM D2047 with a static coefficient of friction ≥ 0.50 . Flexco Distinct Designs Rubber Stair Treads contribute to LEED v4 and v4.1 credits and are certified under FloorScore® and NSF/ANSI 332 Level 1. They also comply with CA Section 01350 and CHPS criteria, and qualify under American-made product provisions.

This EPD includes a table of nominal dimensions and corresponding weights per meter for each design covered, along with multiplication factors to calculate life cycle impacts for individual product configurations. While LCA results are based on a declared unit of 1 meter of average product, profile-specific results can be derived using these published multipliers. The environmental impact results of products in this document are based on a declared unit and therefore do not provide sufficient information to establish comparisons. The results shall not be used for comparisons without knowledge of how the physical properties of the product impact the precise function at the construction level. The environmental impact results shall be converted to a functional unit basis before any comparison is attempted.

Product Specifications

Product Classification Codes:

EC3 - Finishes -> Flooring -> ResilientFlooring

UNSPSC - 30161705

Material Composition

Material/Component Category	Origin	% Mass
Binder	United States	22-28
Filler	United States	53-65
Additive	Various	11-13
Pigment	Various	2-4

Packaging Material	Origin	kg Mass
Corrugated cardboard	United States	0.195
Polyethylene wrap	United States	0.007
Pallet (wood)	United States	3.244

Biogenic Carbon Content	kg C per m
Biogenic carbon content in product	0.184
Biogenic carbon content in accompanying packaging	6.305

Hazardous Materials

No regulated hazardous or dangerous substances are included in this product.

EPD Data Specificity

Primary Data Year: 2023

Manufacturing Specificity:

- ✗ Industry Average
- ✗ Manufacturer Average
- ✓ Facility Specific

Averaging:

EPD averaging was not conducted. This EPD represents a specific product manufactured at a single production facility.

Software And Database

LCA Software:	openLCA v. 2.4
LCI Foreground Database(s):	Ecoinvent v. 3.10 Global, Rest of World (RoW), and United States Cut-off by classification
LCI Background Database(s):	Ecoinvent v. 3.10 Global, Rest of World (RoW), and United States Cut-off by classification

A foreground LCI database is the database used to model the primary, site-specific data collected for this EPD. A background LCI database is the database used to model generic or non-specific data.

Data Quality

Primary data were collected from Flexco Corporation's manufacturing facility for the 2023 calendar year and represent actual production processes for the declared product. Background data were sourced from the ecoinvent v3.10 database using the cut-off system model. All data meet the data quality requirements of the SmartEPD Part A and Smart EPD General Program Instructions v2.0. No significant data gaps or representativeness issues were identified; therefore, no data quality disclaimer is required for this EPD.

Data Sources

Material/Process Category	Module	Material/Process Name	Inventory Dataset Name	Dataset Geographic Region	Reporting Period/Year Dataset Represents	Reference	Amount (if relevant)	Unit
Raw Materials	A1	Styrene butadiene rubber	acrylonitrile-butadiene-styrene copolymer production	RoW	2023	ecoinvent 3.10	ND	ND
Energy	A3	Electricity	market for electricity, medium voltage	US-RFC, modified	2023	ecoinvent 3.10	ND	ND
Energy	A3	Natural gas	market for heat, central or small-scale, natural gas	GLO	2023	ecoinvent 3.10	ND	ND

Life Cycle Module Description

Modules A1–A3 (Raw Material Supply, Transport, and Manufacturing):

These modules include the extraction and processing of raw materials used in the product, including synthetic rubber, plasticizers, fillers, and other additives. Transport of raw materials to the manufacturing facility is included, along with manufacturing processes such as mixing, molding, and curing. Energy and water use, as well as packaging materials, are included. Manufacturing occurs in Tuscumbia, Alabama, and data are based on annual facility-level consumption values.

Modules A4 (Transport to Site and Installation): This module includes shipping of the product from manufacturing site to project site.

Module A5 (Installation): This module includes product installation. Impacts from the production, transport and disposal of waste material associated with installation are included in this phase in addition to impacts from packaging disposal.

Modules C1–C4 (End-of-Life):

- C1 (Deconstruction): Deconstruction is assumed to be manual with negligible environmental impact.
- C2 (Transport): Product is transported 32 km by truck to end-of-life treatment.
- C3 (Waste Processing): No additional waste processing is required prior to final disposal.
- C4 (Disposal): It was assumed that all products are landfilled at the end of their life. Impacts from disposal are modeled accordingly.

LCA Discussion

Allocation Procedure

Co-product Allocation

No co-product allocation was necessary in the system.

Allocation of Background Data

Background data sourced from the ecoinvent v3.10 database are modeled using the “cut-off, at classification” system model. Under this method, recycled content carries no upstream environmental burdens, and the burdens of waste treatment are assigned to the original product system.

End-of-Life Allocation

At end of life, the product is treated using the same cut-off approach. Any material recovered for recycling is considered to exit the system boundary without further allocation of burdens or credits.

Cut-off Procedure

No cut-off criteria were defined within the system boundary. All available energy and material flow data were included in the model. Proxy data were used when necessary to ensure comprehensive representation of life cycle impacts.

Renewable Electricity

Energy Attribute Certificates (EACs) such as
Renewable Energy Certificates (RECs) or Power
Purchase Agreements (PPAs) are included in the
baseline reported results: ✗ No

Scenarios

Transport to the building/construction site (A4)

A4 Module

Fuel Type:	Diesel
Vehicle Type:	Diesel Truck
Transport Distance:	755 km
Packaging Mass:	3.446 kg
Gross density of products transported:	1760 kg/m3
Weight of products transported:	3.095 kg
Capacity utilization volume factor:	<1
Assumptions for scenario development:	Transport to the construction site is modeled as 755 km via heavy-duty truck, using diesel fuel. Gross density is estimated at 1,760 kg/m³.

Installation in to the building/construction site (A5)

A5 Module

Installation Scrap Rate Assumed:	7.5 %
Ancillary Materials:	0.05 kg
Product Lost per Declared/Functional Unit:	0.251 kg
Waste Materials at the Construction Site Before Waste Processing:	3.697 kg
Mass of Packaging Waste Specified by Type:	0.195 kg corrugated cardboard, 0.007 kg shrink wrap, 3.244 kg wood pallet kg
Biogenic Carbon Contained in Packaging (kg C):	6.305 kg
Assumptions for scenario development:	Installation is performed manually without operational energy or water use. Adhesive is applied at a rate of 0.5 kg per m. Installation loss is assumed to be 4.5%. No VOC emissions or direct environmental emissions are reported during installation.

End of Life (C1 - C4)

C1 - C4 Modules

Collection Process

Collected Separately: 3.462 kg

Recovery

Landfill: 3.462 kg

Disposal

Product or Material for Final Disposal: 3.462 kg

Assumptions for scenario development:

At end of life, 100% of the product mass is assumed to be removed manually and sent to a municipal landfill. No reuse, recycling, or energy recovery is modeled. No direct emissions to air, soil, or water are associated with the disposal process. This scenario reflects a conservative baseline consistent with the SmartEPD Part A and industry practice.

Results

Environmental Impact Assessment Results

IPCC AR6 GWP 100, TRACI 2.2

per 1 m of product.

LCIA results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins or risks.

Impact Category	Unit	Method	A1 - A3	A4	A5	C1	C2	C3	C4

Note:

Not all abbreviated indicators listed below may be present in the results above. The inclusion of indicators varies based on PCR requirements.

Abbreviations:

GWP = Global Warming Potential, 100 years (may also be denoted as GWP-total, GWP-fossil (fossil fuels), GWP-biogenic (biogenic sources), GWP-luluc (land use and land use change)), ODP = Ozone Depletion Potential, AP = Acidification Potential, EP = Eutrophication Potential, SFP = Smog Formation Potential, POCP = Photochemical oxidant creation potential, ADP-Fossil = Abiotic depletion potential for fossil resources, ADP-Minerals&Metals = Abiotic depletion potential for non-fossil resources, WDP = Water deprivation potential, PM = Particular Matter Emissions, IRP = Ionizing radiation, human health, ETP-fw = Eco-toxicity (freshwater), HTP-c = Human toxicity (cancer), HTP-nc = Human toxicity (non-cancer), SQP = Soil quality index.

Comparisons cannot be made between product-specific or industry average EPDs at the design stage of a project, before a building has been specified. Comparisons may be made between product-specific or industry average EPDs at the time of product purchase when product performance and specifications have been established and serve as a functional unit for comparison. Environmental impact results shall be converted to a functional unit basis before any comparison is attempted. Any comparison of EPDs shall be subject to the requirements of ISO 21930 or EN 15804. EPDs are not comparative assertions and are either not comparable or have limited comparability when they have different system boundaries. EPDs are not comparative assertions and are either not comparable or have limited comparability when they have different system boundaries, are based on different product category rules or are missing relevant environmental impacts. Such comparison can be inaccurate, and could lead to erroneous selection of materials or products which are higher-impact, at least in some impact categories.

Resource Use Indicator

per 1 m of product.

Indicator	Unit	A1 - A3	A4	A5	C1	C2	C3	C4

MFR	kg	9.82e-1	0	2.49e+0	0	0	0	0
MER	kg	0	0	0	0	0	0	0
EEE	MJ	0	0	0	0	0	0	0

Note:

Not all abbreviated indicators listed below may be present in the results above. The inclusion of indicators varies based on PCR requirements.

Abbreviations:

HWD = Hazardous waste disposed, NHWD = Non-hazardous waste disposed, RWD = Radioactive waste disposed, HLRW = High-level radioactive waste, ILLRW = Intermediate- and low-level radioactive waste, CRU = Components for re-use, MFR or MR = Materials for recycling, MER = Materials for energy recovery, MNER = Materials for incineration, no energy recovery, EE or EEE = Recovered energy exported from the product system, EET = Exported thermal energy.

Carbon Emissions and Removals

per 1 m of product.

Indicator	Unit	A1 - A3	A4	A5	C1	C2	C3	C4
BCRP	kg CO2	-6.36e-1	0	-1.97e+0	0	0	0	0
BCEP	kg CO2	0	0	1.97e+0	0	0	0	6.36e-1
BCRK	kg CO2	-4.00e-1	0	0	0	0	0	0
BCEK	kg CO2	0	0	4.00e-1	0	0	0	0

Note:

Not all abbreviated indicators listed below may be present in the results above. The inclusion of indicators varies based on PCR requirements.

Abbreviations:

BCRP = Biogenic Carbon Removal from Product, BCEP = Biogenic Carbon Emission from Product, BCRK = Biogenic Carbon Removal from Packaging, BCEK = Biogenic Carbon Emission from Packaging, BCEW = Biogenic Carbon Emission from Combustion of Waste from Renewable Sources Used in Production Processes, CCE = Calcination Carbon Emissions, CCR = Carbonation Carbon Removals, CWNR = Carbon Emissions from Combustion of Waste from Non-Renewable Sources used in Production Processes, GWP-luc = Carbon Emissions from Land-use Change.

Scaling Factors

Design	Multiplier	Weight (kg/m)
120 SQ Heavy Duty Smooth	0.661	0.645
550 SQ-ADJ Heavy Duty Radial	1.079	1.032
650 SQ Heavy Duty Diamond	1.011	0.967
650 RD Heavy Duty Diamond	1.011	0.967

Design	Multiplier	Weight (kg/m)
701 SQ-ADJ Heavy Duty Radial II	0.899	0.860
701E SQ-ADJ HD Ext. Radial II	0.719	0.860
900 SQ-ADJ HD Hammered	0.864	0.860
1701 SQ-ADJ HD Radial w/ Riser	0.653	1.075
1900 SQ HD Hammered w/ Riser	0.653	1.075

Interpretation

The largest sources of impact are raw materials (A1), followed by manufacturing (A3), for all indicators other than GWPbiogenic. Raw material (A1) impacts come primarily from SBR (styrene butadiene rubber), as well as kaolin and titanium dioxide. Manufacturing (A3) impacts are driven by electricity and natural gas consumption. For GWPbiogenic, disposal (C4) is the largest contributor due to the landfilling impacts.

Further Information

Since this product is available in a variety of configurations and weights, the table below provides multiplication factors to facilitate calculation of environmental impacts for other variants. These multipliers were derived based on deviations from the average product weight for this product, as presented in Section 4 of this EPD. To estimate impacts for alternate configurations, users may multiply the values in the results tables by the appropriate factor from the table above.

Baseline Product Specifications
